## New "Compact automatic system A50H" from WESTFALIA-Automotive

Vehicle view with and without attached ball tow bar

Westfalia's new "Compact automatic system" extends downwards the model range of detachable towbar. In the past only manually detachable systems have been offered for subcompact vehicles, because the premium, automatically locking systems had hardly found any acceptance in this segment. Due to space limitations in small cars, hidden vertical solutions had been feasible only to a degree. A further reason was the need - in particular for vehicles manufactured in France or Italy - for a removable towbar because of the placement of the licence plate. This is covered on numerous vehicles by a fixed ball head coupling so that a removable towbar is absolutely necessary. In order to provide a solution that is adequate respective to the vehicle's value, manually removable systems had been used in the past in this segment. Such are no longer modern for various reasons, as for instance:

- **Effects of wear, such as deformed ball tow bars and receiving lugs.**
- **Handling problems and also because of corrosion and soiling**
- **Lack of theft protection**

Westfalia-Automotive's new System A50H is now a sensible compromise of the financial requirements of the customer and Westfalia's own qualitative and technical self-conception. The features that have proven themselves millions of times in the automatic system A40V, which has been authorised by all leading automobile manufacturers, was adapted and "dressed down" to the lesser tow

loads and visual requirements of the subcompact segment. The result is a convenient, high-quality detachable system in the expected Westfalia quality at a great cost effectiveness. The quality features can be summarised as follows:

Attaching the ball tow bar

- **easy to apply**
- **automatic, quick, and reliable**
- **wear-free because of automatic self-adjustment**
- **high-quality**
- **theft-proof**

Westfalia is pushing as quickly as possible to introduce the new A50H system for a number of new models. The first removable models for the Ford Fiesta, Ford Fusion, Nissan Note, and Peugeot 207 are now ready for shipment. Further interesting types will follow shortly.
